

ATO Life Science Add-on Validation Guide

How to Verify the Add-on Is Installed in S4 System

SAP S/4HANA Public Cloud | System: QJ6-001 | Package: CGTO_S4HC_POC

Release CE2608 Deliverables | Date: 2026-06-26

8 Validation Methods — Quick Reference

#	Method	Transaction	Priority	What It Validates
1	SAINT — Add-on Installation Tool	SAINT	Primary	Life Science Add-on fully installed
2	Check ATO Extension Tables	SE11	Primary	/ATO/S4_PO_HEADER_EXT and /ATO/S4_PO_ITEM_EXT exist and Active
3	Check Package Objects	SE80 / SE21	Secondary	Package CGTO_S4HC_POC has expected objects
4	Check Namespace Registration	SE03	Secondary	/ATO/ namespace registered and active
5	Check Change Document Object (CE2608)	SCDO	Primary	EINKBELEG object includes ATO table — CE2608 specific
6	Check OData API Extension (CE2608)	/IWBEP/V4_ADMIN	Primary	PurchaseOrder V4 API extensibility enabled — CE2608 specific
7	SE16N Runtime Data Check	SE16N	Secondary	ATO tables have data — end-to-end integration working
8	System Component List	SM51	Secondary	Add-on component version visible in system info

■ Start with Method 1 (SAINT) — it gives the definitive answer in one screen. Then verify Methods 2, 5 and 6 to confirm CE2608-specific objects are applied. Methods 3, 4, 7, 8 provide additional confirmation.

■ Prerequisites: GxP mandatory training must be completed before accessing QJ6-001. Training record is logged and auditable. Contact the ATO team (Loring Wu / Satish Kumar) if access is denied.

1

SAINT — SAP Add-on Installation Tool

Primary

Transaction: SAINT

Step	Action	What to Enter / Look For
1	Open SAINT	Transaction code: SAINT → press Enter
2	Go to Status tab	Click the 'Status' tab at the top of the SAINT screen
3	Search for add-on	In the list, look for one of these entries: • LS_ADD_ON (Life Science Add-on — combined product) • ATO_S4HC (Advanced Therapy Orchestration for S4HC) • CGTO_S4HC (old name — Cell and Gene Therapy Orchestration)
4	Check Status column	The Status column must show: INSTALLED Also note the Version and Patch Level for documentation.

Result	Meaning	Action
LS_ADD_ON / ATO_S4HC status = INSTALLED	Life Science Add-on fully installed — all tables and objects delivered	Proceed to Methods 2 and 5 to verify specific objects
Entry visible but status ≠ INSTALLED	Add-on started but not completed — partial installation	Contact Basis team — re-run SAINT installation
No entry found	Add-on NOT installed in this system	Contact Basis / SAP Cloud Operations to install

✓ PASS	LS_ADD_ON or ATO_S4HC shows status INSTALLED with version and patch level.	✗ FAIL	No entry or non-INSTALLED status — add-on not applied. Contact Basis team.
--------	--	--------	--

SAINT is the single most reliable check. If SAINT shows INSTALLED, the add-on transport has been applied. All /ATO/ namespace objects should then exist.

2

SE11 — Check ATO Extension Tables Exist and Are Active

Primary

Transaction: SE11

Step	Action	What to Enter / Look For
1	Open SE11	Transaction code: SE11 → select 'Database Table' radio button
2	Check Header Extension Table	Enter: /ATO/S4_PO_HEADER_EXT → click Display Expected: table definition opens showing fields: EBELN (FK to EKKO), THERAPY_TYPE, CLINICAL_STUDY, PROTOCOL_REF
3	Check Item Extension Table	Enter: /ATO/S4_PO_ITEM_EXT → click Display Expected: table definition opens showing fields: EBELN+EBELP (FK to EKPO), THERAPY_TYPE, PATIENT_REF
4	Verify Active status	In the table definition screen, top right area shows: Active (shown in green or as 'Active' text) If it shows 'Inactive' or 'Revised' → table not activated
Result	Meaning	Action
/ATO/S4_PO_HEADER_EXT exists and Active	ATO header extension table delivered correctly	Check /ATO/S4_PO_ITEM_EXT next
/ATO/S4_PO_ITEM_EXT exists and Active	ATO item extension table delivered correctly	Proceed to Method 5 (SCDO)
Table does not exist	Add-on transport NOT applied — tables not delivered	Re-verify SAINT result. Apply ATO transport from package CGTO_S4HC_POC
Table exists but Inactive	Transport applied but activation failed	SE11 → Activate the table manually or re-apply transport
✓ PASS	Both /ATO/S4_PO_HEADER_EXT and /ATO/S4_PO_ITEM_EXT exist and show Active status.	✗ FAIL
		Table missing or Inactive — add-on objects not fully delivered.

3

SE80 / SE21 — Check Package CGTO_S4HC_POC Objects

Secondary

Transaction: SE80 or SE21

Step	Action	What to Enter / Look For
1	Open SE80	Transaction code: SE80 → select 'Package' from the dropdown → enter: CGTO_S4HC_POC → press Enter
2	Expand the package tree	Click the triangle/arrow to expand CGTO_S4HC_POC. Look for sub-nodes: Dictionary Objects, Function Groups, Classes etc.
3	Check key objects	Confirm these objects exist under the package: • Tables: /ATO/S4_PO_HEADER_EXT, /ATO/S4_PO_ITEM_EXT • CDS Views: /ATO/ namespace CDS views • Classes for PO extension logic
4	Alternative: SE21	SE21 → enter package CGTO_S4HC_POC → Display Shows all objects assigned to this package with their types.

Result	Meaning	Action
Package exists with objects listed	POC delivery transport applied — all objects in place	Spot-check individual objects via SE11 / SE24
Package exists but is empty	Package created but transport not applied	Apply CGTO_S4HC_POC transport via STMS
Package does not exist	Entire POC delivery missing from this system	Contact ATO team (Loring Wu) to get transport request number

✓ PASS	Package CGTO_S4HC_POC exists with tables, CDS views and classes listed underneath.	✗ FAIL	Package empty or missing — transport not applied.
--------	--	--------	---

4

SE03 — Check /ATO/ Namespace Registration

Secondary

Transaction: SE03

Step	Action	What to Enter / Look For
1	Open SE03	Transaction code: SE03 → select 'Namespace' from the menu on the left
2	Search for /ATO/ namespace	Enter /ATO/ in the search field → press Enter or click Display
3	Check namespace status	The namespace entry should show: Status: ACTIVE Role: SAP (delivered by SAP) Repair flag: should be set appropriately for the system type

Result	Meaning	Action
/ATO/ namespace found — Status ACTIVE	SAP registered /ATO/ namespace in this system	Namespace is valid — objects can be created/transported
/ATO/ namespace not found	Namespace not registered — unusual if SAINT shows INSTALLED	Contact Basis — namespace registration may have failed

✓ PASS	/ATO/ namespace exists with Status = ACTIVE.	✗ FAIL	Namespace missing — contact Basis team for namespace registration.
--------	--	--------	--

5

SCDO — Change Document Object Includes ATO Table (CE2608 Check)

Primary

Transaction: SCDO

Step	Action	What to Enter / Look For
1	Open SCDO	Transaction code: SCDO → press Enter This shows all Change Document Objects registered in the system.
2	Find EINKBELEG	In the list of objects, find: EINKBELEG This is the standard Purchase Order change document object. Double-click EINKBELEG to open its definition.
3	Go to Table Names tab	Inside EINKBELEG definition, click the 'Table Names' tab. This shows all tables registered under this change document object.
4	Search for ATO table	In the table list, look for: /ATO/S4_PO_HEADER_EXT If found → ATO table is registered → changes to ATO fields will be recorded in CDPOS with OBJECTCLAS = EINKBELEG
5	Note the function module	Also check if a custom function module exists for handling ATO changes: SE37 → search for function modules in /ATO/ namespace related to change docs

Result	Meaning	Action
/ATO/S4_PO_HEADER_EXT in EINKBELEG table list	CE2608 change document work applied — ATO changes will be in CDPOS	Proceed to SE16N to verify actual CDPOS records (Method 7)
EINKBELEG exists but /ATO/ table NOT in list	CE2608 change doc registration NOT applied	ATO team must extend EINKBELEG to include /ATO/S4_PO_HEADER_EXT
EINKBELEG not found at all	Standard PO change document object missing — system issue	Contact Basis — standard object EINKBELEG should always exist

✓ PASS	/ATO/S4_PO_HEADER_EXT listed under EINKBELEG in SCDO — CE2608 change doc work applied.	✗ FAIL	ATO table NOT in EINKBELEG — CE2608 change doc extension not applied. ATO team action needed.
--------	--	--------	---

This check is specific to CE2608 deliverable. The ATO team (Allen Yuan) confirmed they extended EINKBELEG to include the ATO table AND adjusted the function module to handle ATO field changes. An implicit enhancement was also added for description text display. All three must be in place for complete change document integration.

6

V4_ADMIN — OData V4 API Extensibility Enabled (CE2608 Check)

Primary

Transaction: /IWBEP/V4_ADMIN

Step	Action	What to Enter / Look For
1	Open V4 Admin	Transaction: /IWBEP/V4_ADMIN → press Enter Or navigate via /n/IWBEP/V4_ADMIN
2	Find PurchaseOrder API	In the service list, search for: Technical Name: API_PURCHASEORDER_2 or Description containing 'Purchase Order'
3	Check extensibility setting	Click the service → go to Properties or Settings tab. Look for: Internal Extensibility = Enabled This is the CE2608 deliverable — 'OData V4 API enabled for internal extensibility (without the PaaS API extension)'
4	Alternative check via SPRO	SPRO → SAP NetWeaver → Gateway → OData V4 → Service Administration Find PurchaseOrder service → verify extensibility flag

Result	Meaning	Action
Internal Extensibility = Enabled	CE2608 OData V4 API extensibility delivered — ATO can extend the API	ATO OData extension should work correctly
Internal Extensibility = Disabled or not found	CE2608 API enablement not applied to this system	PO standard team must apply CE2608 API extensibility transport
Service API_PURCHASEORDER_2 not found	OData V4 PurchaseOrder service not registered in this system	Register via /IWFND/V4_ADMIN or contact Basis

✓ PASS

API_PURCHASEORDER_2 found with Internal Extensibility = Enabled.

✗ FAIL

Extensibility disabled or service not found — CE2608 API work not applied.

CE2608 delivered: 'The OData V4 API is enabled for internal extensibility (without the PaaS API extension). Customer extensibility...' — GxP Handover Slide 10. This was a prerequisite blocker for ATO: they found it was NOT enabled during POC and the PO standard team (Nils/Jiss) had to plan and deliver this change.

7

SE16N — Runtime Data Check (Confirm Integration Working)

Secondary

Transaction: SE16N

Step	Action	What to Enter / Look For
1	Check header extension table	SE16N → Table: /ATO/S4_PO_HEADER_EXT → Execute (no filter) This shows all ATO-enriched PO header records.
2	Check item extension table	SE16N → Table: /ATO/S4_PO_ITEM_EXT → Execute (no filter) This shows all ATO-enriched PO item records.
3	Check CDHDR for ATO-triggered POs	SE16N → CDHDR → filter OBJECTCLAS = EINKBELEG Look for recent entries triggered by ATO service user
4	Check CDPOS for ATO field entries	SE16N → CDPOS → filter TABNAME = /ATO/S4_PO_HEADER_EXT Rows here confirm ATO changes are being recorded in change document

Result	Meaning	Action
Rows exist in /ATO/ tables	Add-on installed AND POs already created via ATO integration	End-to-end integration working — run TC-04 to TC-07 for full validation
Tables exist but are empty	Add-on installed but no ATO-triggered POs created yet	Normal for fresh system — run TC-02 to TC-04 to create first ATO PO
CDPOS has rows with TABNAME = /ATO/ table	Change Document recording ATO field changes — CE2608 working	CE2608 change doc integration confirmed
Tables do not exist	Add-on NOT installed — SE11 check will confirm	Go back to Method 1 (SAINT) to verify installation status

✓ PASS	Tables exist. Rows present (or empty on fresh system). CDPOS has /ATO/ table entries.	✗ FAIL	Tables do not exist — add-on not installed. CDPOS has no /ATO/ rows — CE2608 change doc not working.
--------	---	--------	--

Step	Action	What to Enter / Look For
1	Via System menu	Menu: System → Status → click 'Component Information' button (or F2) A list of installed SAP components with versions appears.
2	Via SM51	Transaction: SM51 → select an application server → click 'Release Notes' or 'Component Info' button
3	Search for ATO/LS component	In the component list, look for: • LS_ADD_ON — Life Science Add-on • ATO_S4HC or CGTO_S4HC Note the Release, Patch Level and SP Level for documentation.
4	Document the version	Record the version for: • GxP qualification documentation • Client audit evidence package • Change management records

Result	Meaning	Action
LS_ADD_ON / ATO component visible with version	Add-on installed — version confirmed for documentation	Record version for qualification docs and client audit evidence
Component not in list	Add-on not installed or component name differs	Cross-check with SAINT (Method 1) — SAINT is more reliable

✓ PASS	LS_ADD_ON or ATO_S4HC component visible with version and patch level.	✗ FAIL	Component not visible — use SAINT (Method 1) as primary confirmation.
--------	---	--------	---

Complete Validation Checklist

Run in order — tick each item before proceeding to next

#	Check	Transaction	Expected Result	If Fails
■ 1	LS_ADD_ON / ATO_S4HC shows INSTALLED	SAINT	Status = INSTALLED with version	Contact Basis — apply add-on installation
■ 2	/ATO/S4_PO_HEADER_EXT exists and Active	SE11	Table definition opens, status = Active	Apply CGTO_S4HC_POC transport
■ 3	/ATO/S4_PO_ITEM_EXT exists and Active	SE11	Table definition opens, status = Active	Apply CGTO_S4HC_POC transport
■ 4	Package CGTO_S4HC_POC has objects	SE80	Tables, CDS, Classes listed under package	Get transport from ATO team (Loring Wu)
■ 5	/ATO/ namespace = ACTIVE	SE03	Namespace found, status = Active	Contact Basis for namespace registration

■ 6	EINKBELEG includes /ATO/S4_PO_HEADER_EXT [CE2608]	SCDO	ATO table in EINKBELEG table list	ATO team must extend EINKBELEG object
■ 7	PurchaseOrder V4 API extensibility enabled [CE2608]	/IWBEP/V4_ADMIN	Internal Extensibility = Enabled	PO standard team (Nils/Jiss) to apply CE2608 API transport
■ 8	SE16N — /ATO/ tables accessible (empty OK)	SE16N	Table opens — empty = OK for fresh system	Table not found — SAINT check first
■ 9	CDPOS records exist with TABNAME=/ATO/ table	SE16N → CDPOS	Rows present after first ATO PO creation	Run TC-05 test case to trigger and verify

Summary — What Each CE2608 Deliverable Means

CE2608 Deliverable	Method to Verify	Status
Change Document verified for all standard PO fields	SE16N → CDHDR/CDPOS for standard PO changes	■ Verified — standard framework, always worked
OData V4 PurchaseOrder API — internal extensibility enabled	Method 6: /IWBEP/V4_ADMIN	■ Delivered CE2608 — verify with Method 6
ATO extension tables /ATO/S4_PO_HEADER_EXT and ITEM_EXT	Method 2: SE11	■ Delivered CE2608 — verify with Method 2
Change Document object EINKBELEG extended for ATO tables	Method 5: SCDO	■ ATO POC — verify with Method 5
Implicit enhancement for ATO field description in change log	ME23N → Environment → Changes → check ATO field labels	■ POC approach — acceptability pending with PO team
eSignature integration in ME21N	N/A — not yet delivered	■ Planned 2702

■ For GxP Qualification Documentation: record the results of each check above with screenshots as evidence. Include: system ID (QJ6-001), transaction name, date of check, tester name, and result. This forms part of the IQ (Installation Qualification) evidence package for client audits.
