

GxP / CGTO / eSignature — Skill Reference Guide

GxP / CGTO / eSignature — Skill Reference Guide

Project: GxP Compliance, CGTO/ATO Integration, eSignature for Purchase Orders **Skill Name:** gxp-cgto-esignature-expert **Location:** C:\Users\I308878\GxP-CGTO-eSignature_Requirement **Date:** 2026-06-19 **Version:** 1.0 **Sources:** GxP Handover (Lift & Shift), CGTO PO Alignment meeting documents

1. What This Is About — Three Topics in One

This skill covers three interconnected topics all affecting the **Purchase Order** in SAP S/4HANA:

Topic	What It Is	Status
GxP	Life Science compliance framework requiring audit trails + eSignature	Enablement started 2026
eSignature	Digital signature captured on PO save — linked to Change Document	Planned 2702
CGTO / ATO	Life Science industry fields added to PO (Therapy, Study, Protocol)	Development started 2026

2. GxP — The Compliance Context

GxP = Good x Practice — quality standards for regulated Life Science industries.

Standard	Authority	Requirement
21 CFR Part 11	FDA (USA)	Electronic records + signatures
EU Annex 11	EMA (Europe)	Computerised systems

What GxP requires for SAP PO: - Change Document tracking (who changed what, when, old/new value) - Electronic Signature on regulated changes - Tamper-proof audit log

In 2025: GxP was NOT enabled in SAP S/4HANA Cloud. **In 2608:** Change Document for PO verified working. ✓ **In 2702:** eSignature integration in ME21N planned.

3. CGTO / ATO — Who and What

CGTO (Cell & Gene Therapy Orchestration) → renamed **ATO** (Advanced Therapy Orchestration) in May 2026.

ATO is a **hybrid product** — SaaS on BTP + Life Science Add-on for S/4HANA Private Cloud.

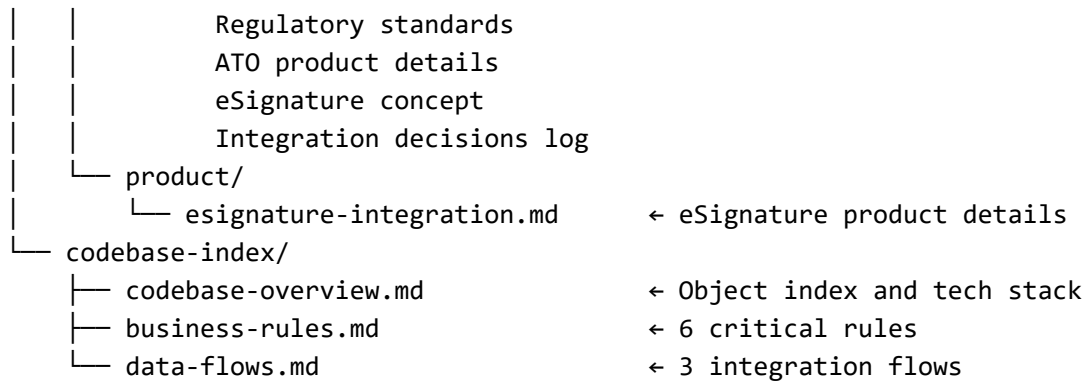

ATO orchestrates supply chains for:

Therapy	Example
Cell & Gene Therapy	CAR-T therapy, gene editing
Plasma Therapy	Plasma-derived medicines
Advanced Medical Devices	Regulated devices
Surgical Therapy	Surgical supply chain
Radio Ligand Therapy	Isotopes for PET cancer

Life Science Add-on (Private Cloud) = ATO + SI + CSAI + CSM + BRH combined.

4. Skill Structure

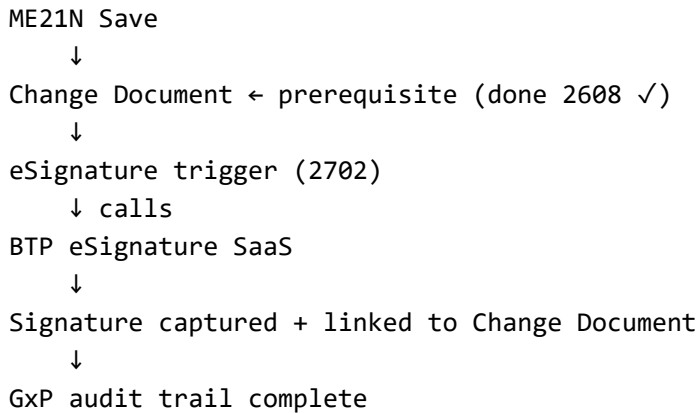

```

5. Architecture Overview

Two Work Streams for Purchase Order

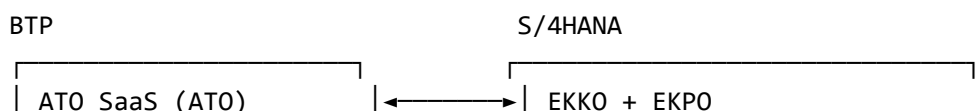

Work Stream 1: eSignature

Work Stream 3: CGTO / ATO Field Extension

Full Integration Landscape

eSignature Service	Events	Industry Object Extensions
Event Mesh	OData	ME21N / ME22N
iFlow (schema map)		Change Document

6. Industry Object Extension Pattern

Decision: CGTO/ATO fields are NOT appended directly to EKKO/EKPO.

Wrong	Correct
EKKO ← append ZZTHERAPY	Industry Object Extension node on EKKO
Pollutes standard table	Clean separation from standard
Not approved for public cloud	Approved by Suite Architecture (North Star)

Extension nodes: - /ATO/S4_PO_HEADER_EXT — header fields (linked to EKKO via EBELN) - /ATO/S4_PO_ITEM_EXT — item fields (linked to EKPO via EBELN+EBELP)

7. Key Business Rules

#	Rule	Why
1	NEVER append CGTO fields directly to EKKO/EKPO	North Star governance — use Industry Object Extension
2	eSignature REQUIRES Change Document working first	eSignature attaches to Change Document
3	ME21N is phase 1 for eSignature — Manage PO App is deferred	BOF app modernisation in progress
4	iFlow handles schema mapping BTP↔S4	Different event schemas on each side
5	Public cloud extensions need Suite Architecture review	North Star governance (Felix Vente)
6	CGTO = ATO (renamed May 2026)	Expanded scope to multi-modal therapies

8. Delivery Timeline

Release	What Was Done	Status
2025	GxP not enabled in S/4HANA	—

Release	What Was Done	Status
2602	Discussions started, POCs	Done
2608	Change Document for PO verified	✓ Done
2702	eSignature in ME21N + CGTO enablement	Planned
Future	eSignature in modernised PO app	Deferred

9. Key Contacts

Name	Role	Topic
Swarnava Chatterjee	eSignature main contact	Work Stream 1
Satish Kumar (Meenakshisundaram)	ATO/CGTO PM + Architecture	Work Stream 3
Viswanath Natesan	ATO Architecture	Work Stream 3
Nils Hartmann	PO Product Owner	Both
Loring Wu	ATO Development Manager	Work Stream 3
Felix Vente	Suite Architecture — North Star	Governance

10. What Makes It Extensible

Adding New CGTO/ATO Fields

1. Add field to Industry Object Extension node (not EKKO/EKPO directly)
2. Expose via OData extension of PurchaseOrder entity
3. Add to outbound event payload for S4→BTP

Adding New eSignature Scope (new app/object)

1. Confirm Change Document works for that object
2. Add eSignature trigger point in the save flow
3. Configure which fields require signature

Adding New Knowledge Documents

Place in: - agent/knowledge/domain/ — new domain rules, regulatory updates -
agent/knowledge/product/ — ATO product updates, eSignature updates -
agent/knowledge/architecture/ — new integration diagrams - Update repos.yaml
